Peer Review for Retail Automation FTOC

Quality of Work: 2

Looks like you have a good start with the sprite code and I imagine you'll have a section for the maps.

Intellectual Merit: 3

I think this project would have a handful of challenges that would require creative thinking. Especially mapping out the campus and coding how to interact with the campus.

Video: 1

I get that you're mapping the campus and using the proud Freddy Falcon as an avatar, but for what purpose? You mention completing challenges, but I don't understand what you have in mind for that. Here's an idea: have to goal be to fully explore the campus and market the game for incoming freshmen with the goal of getting them orientated with the campus virtually before arriving physically. So a challenge could be to find the gym and work out or get from the dorms to a specific classroom then to a cafeteria.
